$\cos C = \frac{\text{adj}}{\text{hyp}}$
only for right triangles

$$c^2 = a^2 + b^2 - 2ab \cos C$$

$$14^2 = 18^2 + 20^2 - 2(18)(20) \cos \theta$$

Law of cosines

1. Find c and C (opposite side-angle pair)
2. Fill in the rest (easy)

???

$$\frac{\sin A}{a} = \frac{\sin B}{b}$$

$$\boxed{\frac{\sin \theta}{14}} = \frac{\sin C}{18}$$

Law of Sines
doesn't work here

43)

$$p = \frac{\frac{1}{2}ay + a}{12y} \Rightarrow \frac{\frac{1}{2}(2a)ay + 2a}{12y} = \frac{1ay + 2a}{12y}$$

2x
as 6 is
as p

$$a = 2a$$

$$2 \left(\frac{\frac{1}{2}ay + a}{12y} \right) = 2p$$

If something takes n^2 time $T = n^2$

And n increases by a factor of 10 ($n \Rightarrow 10n$)
How long does it take to do the new task

$$(ab)^3 = a^3 b^3$$

$$T = (10n)^2 = 100n^2$$

$10^2 = 100x$
from a 10x increase to n

$$42) \frac{1}{\frac{1}{2}} = 2$$

$$1 \div \frac{1}{2}$$

$$1 \cdot \frac{2}{1} = 2$$

$$\frac{1}{2}$$

$$f(g(\frac{1}{2})) \quad g(\frac{1}{2}) = 2$$

$$f(\frac{1}{2}) = 2 - \frac{1}{2} = \frac{3}{2}$$

$$\frac{1}{\frac{2}{\frac{1}{4}}} = \frac{1 \cdot 4}{2} = 2$$

$$(f \circ g)(\frac{1}{2})$$

$$f(g(\frac{1}{2}))$$

- . - = +

$$\frac{1}{\frac{2}{\frac{1}{4}}}$$

$$\frac{1}{2} \cdot \frac{4}{2}$$

$$\frac{1 \cdot 4}{2 \cdot 2} = 1$$

41)

$$\bar{x} = 6.5$$

$$\frac{3+9}{2} = 6 = \text{midpoint}$$

When doing brute force approach,
test smart answers first

$$29) \quad (6 - (3i)^2 = 16 - (-9) = 25$$

$$(3i + 1)^2$$

2LW \Downarrow

$$53) \quad A = 2(2L2W) = 2(4LW)$$

51) $b \leftrightarrow$ vertical shift $a \leftrightarrow$ horizontal shift $(x+a)$ $(x-a)$

$$59) \quad \left(\frac{1}{3}\right)^4 = \frac{1}{81}$$

$$10 \dots (r+1)$$

10 balls, 4 red
Draw 4 without replacement
 $P(\text{"4 red balls"})$

$$\frac{4}{10} \cdot \frac{3}{9} \cdot \frac{2}{8} \cdot \frac{1}{7} < 1$$

$$\frac{4!}{2!} = \frac{4 \cdot 3 \cdot \cancel{2} \cdot \cancel{1}}{\cancel{2} \cdot \cancel{1}}$$

You have 10 balls
labelled 1-10. How many
ways are there to arrange 5?

$$\frac{10}{1} \cdot \frac{9}{1} \cdot \frac{8}{1} \cdot \frac{7}{1} \cdot \frac{6}{1}$$

$$10P5 = \frac{10!}{(10-5)!}$$

$$= \frac{10 \cdot 9 \cdot 8 \cdot 7 \cdot 6 \cdot \cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot \cancel{1}}{\cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot \cancel{1}}$$

combination

permutation

$$nPr = \frac{n!}{(n-r)!}$$

- (1, 2, 3)
- (2, 1, 3)
- (1, 3, 2)
- (2, 3, 1)
- (3, 1, 2)
- (3, 2, 1)

You have 10 balls
labelled 1-10, how many
ways are there to arrange 3?

$$6 = 3 \cdot 2 \cdot 1 = 3!$$

${}^{10}P_3$
 $P(10, 3)$

$$\frac{10!}{(10-3)!} = \frac{10 \cdot 9 \cdot 8 \cdot \cancel{7} \cdot \cancel{6} \cdot \cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot \cancel{1}}{\cancel{7} \cdot \cancel{6} \cdot \cancel{5} \cdot \cancel{4} \cdot \cancel{3} \cdot \cancel{2} \cdot \cancel{1}}$$

combination

$$nC_r = C(n, r) = \binom{n}{r} = \text{"n choose r"} = \frac{n!}{r!(n-r)!}$$

You have 10 balls
labelled 1-10, how many
ways are there to choose 3?

$$\{1, 2, 3\}$$
