

2-20-22 Math 2017 December A10

60 questions, 60 minutes

1 question/min

fl; dr bring questions that take too long to class

22) Don't check the middle numbers *check numbers*

23)

$$\pi \left(\frac{2.25}{2} \right)^2$$

One pin 1.27π

$$\text{Ten pins} = 12.7\pi \approx 40$$

A) 40

Want !! Pin !! Read carefully

40) Ana: $\frac{2}{5}$

Amy: $\frac{1}{3}$

Ruben: $1 - \frac{2}{5} - \frac{1}{3} = \frac{4}{15} \Rightarrow$ If $\frac{4}{15}$ takes 2 hours

$\frac{1}{6}$ takes $2 \cdot \frac{15}{4} = 7.5$ hours

$$43) \quad \frac{2}{3} - \frac{1}{4} \quad \frac{8}{12} - \frac{3}{12} = \frac{5}{12}$$

$$\frac{12 \left(\frac{x}{3} + \frac{1}{2} \right)}{5} = \frac{4x+6}{5}$$

* 28)

2b

$$4a) \quad c^2 = a^2 + b^2 - 2ab \cos C$$

figure out whether you want
C or C

$$c^2 - a^2 - b^2 = -2ab \cos C$$

$$\frac{-c^2 - a^2 - b^2}{2ab} = \cos C$$

$$\cos^{-1} \left(\frac{-c^2 - a^2 - b^2}{2ab} \right) = \boxed{\cos^{-1}(\cos(C))} = C$$

$$C = \cos^{-1} \left(\frac{-c^2 - a^2 - b^2}{2ab} \right)$$

$$\boxed{B}$$

$$f^{-1}(f(x)) = x$$

$$f: A \rightarrow B$$

$$f^{-1}: A \rightarrow B$$

$$f^{-1}(f(1))$$

33) Airplane horizontal
 $x = \dots$ vertical

C

$$A: (0, 0)$$

be careful, A might not start at 0

$$\begin{aligned} 52) \quad n=1 & \quad s_1 = 3 \\ n=2 & \quad s_2 = 9 = 2(3) + 2 + 1 \\ n=3 & \quad s_3 = 22 \\ n=4 & \quad s_4 = 49 \end{aligned}$$

s_0 start at s_0 or
 s_1 s_1 ?

54) Geometry: Always draw diagram

Even for hard questions,
 you're always 1-2
 small steps from
 answer,
 attempt each question fully.

(66)

K

Graphing imaginary solutions

Not necessary

send later

To get actual roots,

$$x+1 \overline{4x^3-2x^2+x+7}$$

solutions to polynomial = degree (highest power) of polynomial
(hidden) (*)
(imaginary)

$(x-1)^2$ How many solutions? 2

$$(x-1)(x-1)$$

$$x=1 \quad x=1$$

(*)

54) expected value average (mean)

{1, 2, 2, 3, 3, 3, 4, 4, 4, 4}

$$\frac{1+2+2+3(3)+4(4)}{10} = 3$$

Flip a coin H = 3 pts T = 0 pts

Expected value of a toss? 1.5 pts per toss

59) Be aware of when something might be wrong

Do sanity checks

$V = lwh$

$$= 1.1 \cdot 2 \cdot 1.1 \cdot w \cdot h$$

$$1.1 \cdot 1.1 = 1.21$$

$$2.1 \frac{3}{4}$$

How much does volume increase when just $l \rightarrow 1.1l$ $1.1 \times$
