

$$\cos \theta = \frac{\text{adj}}{\text{hyp}} = \frac{x}{1} = x \text{ if } r=1 \text{ (unit circle)}$$

Similarly,  $\sin \theta = y \text{ if } r=1$

Positive:  $\sin \theta$   
Negative:  $\cos \theta$

Know QII, III, IV  
values by symmetry.  
I'll fill in a few.

Positive:  $\cos \theta$   $\sin \theta$   
Negative:

Polar  
coordinates

Note: in general,  $x = r \cos \theta$ ,  $y = r \sin \theta$  because

$$\cos \theta = \frac{x}{r} \Rightarrow x = r \cos \theta$$

Similarly,  $y = r \sin \theta$

Special case  
when  $r=1$   
(i.e. unit  
circle)

So when  $r=1$ ,  $\cos \theta = x$   $\sin \theta = y$
